CITY VERTICAL TEST RESULTS

Based on the data set collected so far, there is little relation between the Nb concentration in the BCP solution and field emission or the maximum x-ray levels (Figure 7 A-D).

- 3 HVs processed and tested
- 9 total vessels
- Cumulative etch removal ranges 98 - 215
- Nb concentration ranges 8.1 - 38 grams per liter in BCP at the start of etch

ACKNOWLEDGEMENTS: The authors would like to thank all the members of the NSCL & FRIB staff whose dedicated effort has made a significant contribution to the progress. In particular, Steve Bricker, Chris Compton, Alberto Faccio, Gerald Ganti, Matt Hodel, Tim Kate, Doug Miller, Sam Miller, Dave Norton, Katie Pomarzel, Nicholas Putman, Greg Valero, and John Winstein. We also would like to acknowledge the impact of our weekly DTF teleconference on the overall success of our program, with special thanks to Curtis Crawford, Walter Hertung, Bob Landal, and Peter Knasel for their continued contributions.
