

The properties of normal conducting cathodes in FZD superconducting cavity

Xiang, Rong; Arnold, A.; Buettig, M.; Janssen, D.; Justus, M.; Lehnert, U.
Michel, P.; Murcek, P.; Schamlott, A.; Schneider, Ch.; Schurig, R.; Staufenbiel, F.; Teichert, J.

Introduction

FZD SRF gun overview

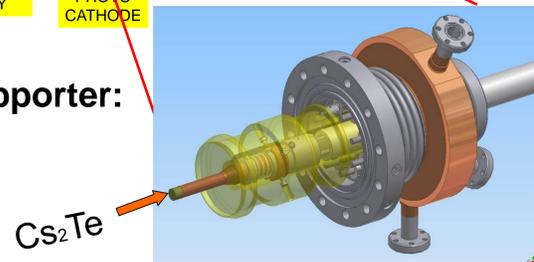

Cs₂Te in SC cavity

Compatibility
QE & Life time
Dark current
.....

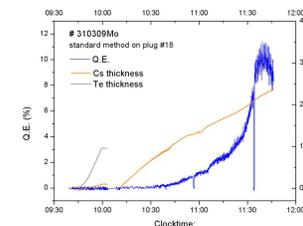

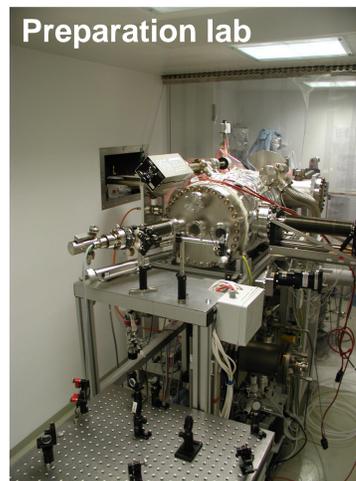

Special cathode supporter:

Isolated to the cavity
Cooled with LN₂
Adjustable position

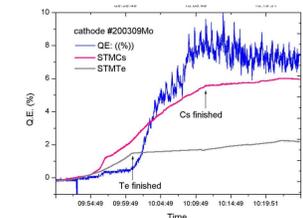

Preparation

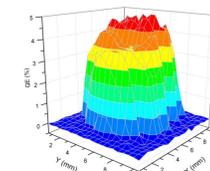

Preparation lab

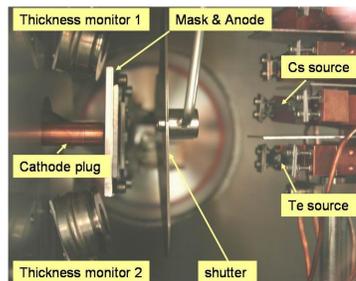

Standard
Te 10nm
Cs activation

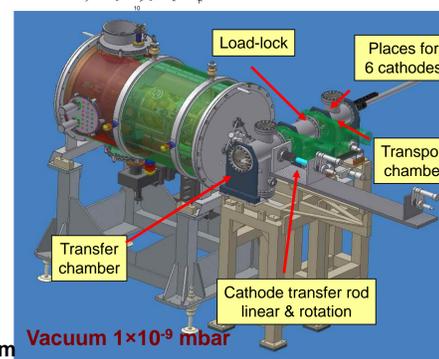

Co-evaporation
Fast process
Slow degradation

Distribution scan
with low intensity
UV laser

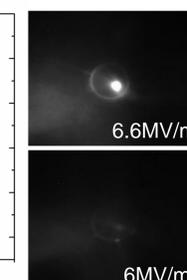

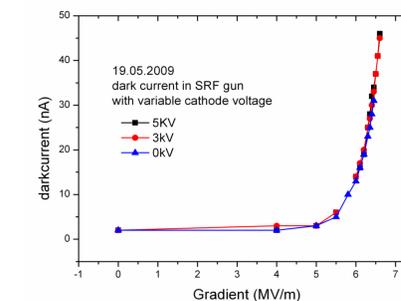

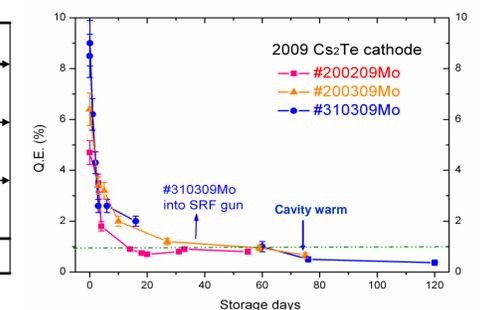

UHV cathode
transfer system

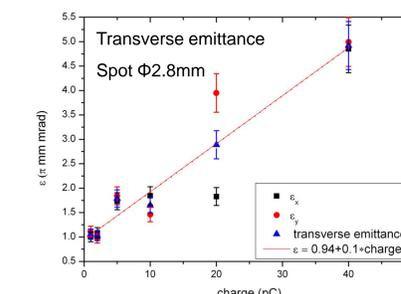

Cs₂Te Photocathode in SRF cavity

Cathode	Serving time	Q.E. in gun
#090508Mo	2008-5-23 to 2008-6-23	0.05%
#070708Mo	2008-7-21 to 2008-9-19	0.1%
#310309Mo	2009-5-8 to 2009-8-24	1.1%
#040809Mo	2009-8-24 ~	0.6%

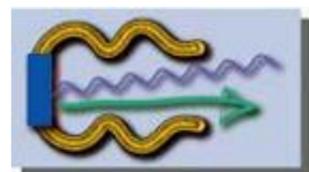

**Dark current from
field emission**
Start from 6MV/m
1.cavity
2.Cathode itself

Thermal emittance
 $\epsilon_{th}(\text{Cs}_2\text{Te}) = 0.67 \pm 0.1 \text{ mm.mrad} * R \text{ (mm)}$
Reference 2 in room temperature:
 $\epsilon_{th}(\text{Cs}_2\text{Te}) \sim 0.6 \text{ mm.mrad} * R \text{ (mm)}$
No obvious temperature effect

Summary and Outlook

Photocathode + Nb cavity →

Next step: better vacuum for higher QE

Alternative: GaAs-
type photocathode

unpolarized electron source
polarized electron source

Acknowledgement

We acknowledge the support of the European Community-Research Infrastructure Activity under the FP6 programme (CARE, contract number RII3-CT-2003-506395), and the FP7 programme (EuCARD, contract number 227579), as well as the support of the German Federal Ministry of Education and Research grant 05 ES4BR1/8. Meanwhile, we thank Ms Romy Aniol for her help in the mechanical polishing of cathode plugs.
