The cartography (goal)

- ▶ Provide a
formal specification of the current Tango Controls
 - ▶ concepts,
 - ▶ terminology,
 - ▶ protocol behavior,
 - ▶ conventions,
- ▶ It shall be on a sufficient level for:
 - ▶ future evolution of Tango Controls
 - ▶ implementation in other languages
- ▶ **Concepts are more important** than implementation details.

The Crew

- ▶ The team is volunteers from the whole Tango Community,
- ▶ The team meets every 2 weeks on a telco to synchronise and discuss pending work,
- ▶ S2Innovation is leading the meetings and does administration work,

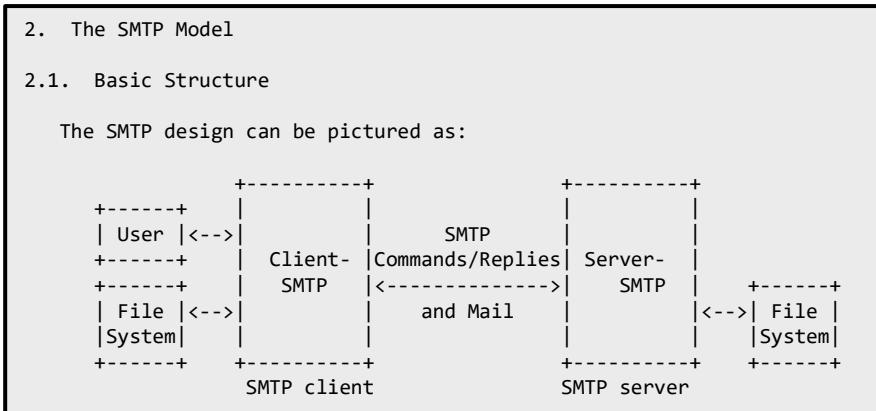

- Vincent Hardion (Max IV)
- David Erb (Max IV)
- Reynald Bourtembourg (ESRF)
- Andy Götz (ESRF)
- Gwenaelle Abeillé (SOLEIL)
- Sergi Blanch-Torné (ALBA)
- Sergi Rubio (ALBA)
- Lorenzo Pivetta (Elettra)
- Graziano Scalamera (Elettra)
- Olga Merkulova (IK)
- Igor Khokhriakov (IK)
- Thomas Braun (byte physics)
- Piotr Goryl (S2Innovation)
- Michal Liszcz (S2Innovation)

The ship (tools)

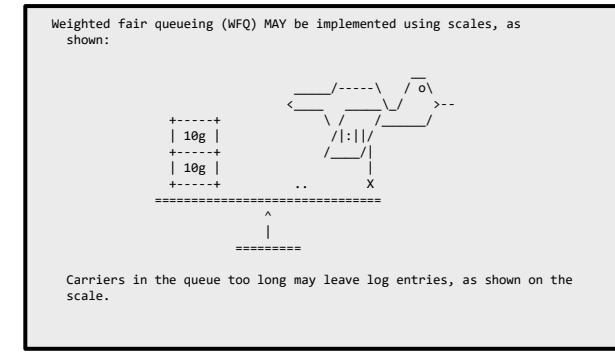

- ▶ Using the Consensus-Oriented Specification System (COSS) + C4,
- ▶ Work is conducted on GitLab (previously GitHub) repository:
<https://gitlab.com/tango-controls/rfc>
- ▶ Documents are written as .MD format, the ABNF is used for describing communication tokens,
- ▶ A dedicated Slack channel is used for communication,
- ▶ 3 x Write the RFC (WtRFC) remote workshops

What is the RFC?

- ▶ RFC means Request For Comments
(the first RFCs were indeed documents circulating between ARPA researchers for gathering comments)
- ▶ Example: <https://tools.ietf.org/html/rfc5321>

RFC 5321 - SMTP

RFC 2549 - IP over Avian Carriers with QoS

COSS - Consensus-Oriented Specification System

- ▶ Facilitates collaborative specification writing,
- ▶ C4 - Similar to source code peer-review process,
- ▶ Roles for each topic:
 - ▶ An editor - a Tango Collaboration representative
 - ▶ Contributors - anyone from the Tango Community, sending a proposal as a pull request

Process

Markdown, ABNF, UML

COSS, C4

Remote Workshops

Regular meetings

- Contribution
- RFCs

- 1/Tango Control System
- 2/Device Model
- 3/Command
- 4/Attribute
- 5/Property
- 6/Database
- 7/The Tango Pipe specification
- 8/Device Server Model
- 9/Data types
- 12/Publisher-Subscriber protocol
- 14/The Tango Logging Service
- 15/The dynamic attribute and command

Read the Docs v: latest

Short Name	Title	Status	Editor
RFC-1	The Tango control system	Raw	Lorenzo Pivetta
RFC-2	The device object model	Draft	Vincent Hardion
RFC-3	The command model	Draft	Sergi Blanqui-Torné
RFC-4	The attribute model	Draft	Sergi Blanqui-Torné
RFC-5	The property model	Draft	Gwenaelle Abeillé
RFC-6	The database system	Draft	Gwenaelle Abeillé
RFC-7	The pipe model	Draft	Reynald Bourtembourg
RFC-8	The server model	Draft	Lorenzo Pivetta
RFC-9	Data types	Draft	Gwenaelle Abeillé
RFC-10	The Request-Reply protocol	Raw	Reynald Bourtembourg
RFC-11	The Request-Reply protocol - CORBA implementation	Raw	
RFC-12	The Publisher-Subscriber protocol	Draft	Vincent Hardion
RFC-13	The Publisher-Subscriber protocol - ZeroMQ implementation	Raw	
RFC-14	Logging service	Raw	Sergi Blanqui-Torné
RFC-15	The dynamic attribute and command	Draft	Reynald Bourtembourg
RFC-16	Cache system	Raw	
RFC-17	Memorised attribute service	Raw	
RFC-18	Authorisation system	Raw	

Result

<https://tango-controls.readthedocs.io/projects/rfc/>

The screenshot displays the Tango Request For Comments (RFC) documentation page. The left sidebar contains a table of contents with various sections. The main content area shows code snippets for attribute events and runtime parameters.

Attribute events section:

```
rel-change = change  
abs-change = change  
  
archive-rel-change = change  
archive-abs-change = change  
  
number = [ "-" ] 1*DIGIT [ "." ] *DIGIT  
change = number [ "," number ]  
  
period = 1*DIGIT  
archive-period = period
```

Attribute runtime parameters:

At given point in time an Attribute MUST have associated:

- *quality*, an enumeration describing the state *read value* (one of VALID, INVALID, ALARM, CHANGING, WARNING),
- *read value*, an object representing the value of the Attribute. It MUST conform to *data format* and *data type*,
- *read dim x*, an integer describing the number of data elements in *read value* in X dimension. If *data format* is SCALAR, it MUST be either 0 or 1. If *data format* is SPECTRUM or IMAGE, it MUST be between 0 and *max dim x*.
- *read dim y*, an integer describing the number of data elements in *read value* in Y dimension. If *data format* is SCALAR or SPECTRUM, it MUST be 0. If *data format* is IMAGE, it MUST be between 0 and *max dim y*.

Tango Controls

V9.x.x

V10

v9 features in a new shape

V11

Tango with features beyond

Benefits of writing the RFCs

- ▶ Managing the future,
- ▶ Community tightening,
- ▶ Building terminology consistency and understanding,
- ▶ Code has been extensively reviewed:
 - ▶ Knowledge has been gained and shared,
 - ▶ Features (and bugs) discovered,
- ▶ Discussion of features for Tango 11, improvement of the current code base..
