# **ABSTRACT**

10MeV/20kW industry irradiation facility(IIF) has been designed by National Synchrotron Radiation Laboratory (NSRL) for years. Modular design power supplies are employed for the latest version, depend on the performance of these power supplies with high precision and high stability, the operating reliability of the IIF has been greatly improved.

# POWER SUPPLY SYSTEM

- *IIF Power supply system*

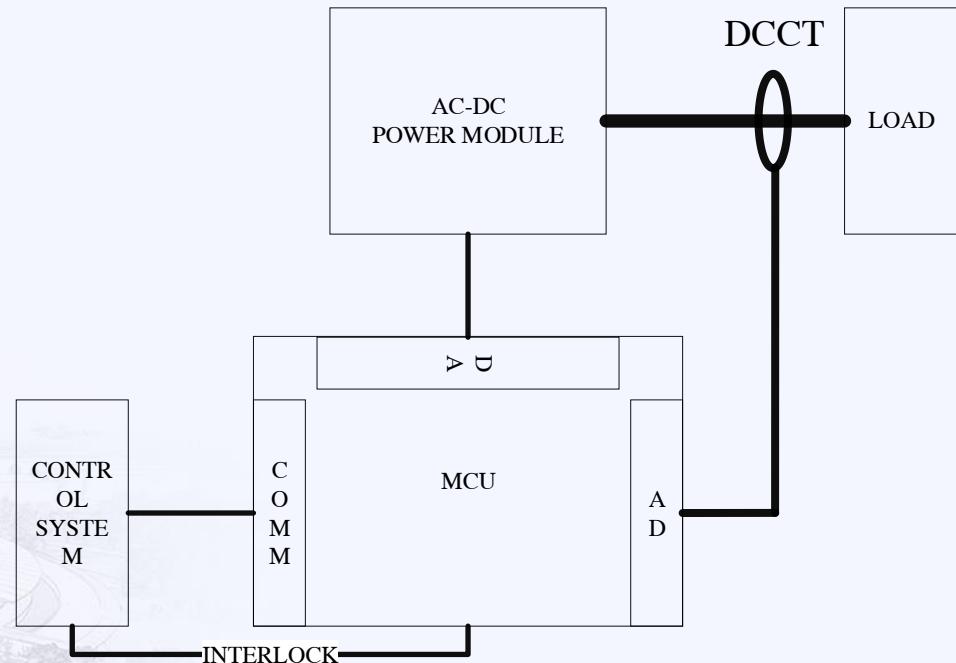

# POWER SUPPLY SYSTEM

*The details of the power supply system*

Type	PS Function	Description
Unipolar DC PS	Focus solenoid for accelerating tube	30A/60V
	Corrector magnet	10A/10V
	E-gun Filament-heater	2.5A/6.3V
	Thyatron filament-heater	100A/15V
	Thyatron hydrogen	20A/15V
	Focus solenoid for klystron	40A/120V
Bipolar PS	Scan magnet	$\pm 10A/37Hz$
Pulse PS	Grid-controlled pulse	+300V/pulse;-100V/DC bias
Modulator	For klystron	130kV/500Hz/16us
Inverter PS	AC klystron filament-heater	AC 3A/220V
High Voltage PS	E-gun HV	DC 45kV/200W
	Ion HV	DC 7kV/400W

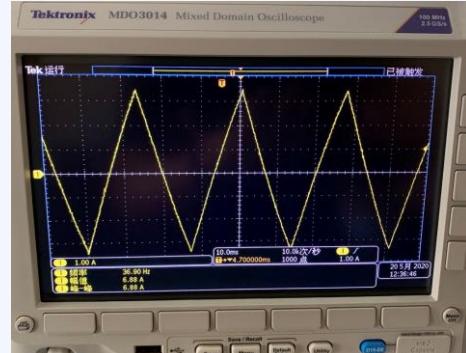

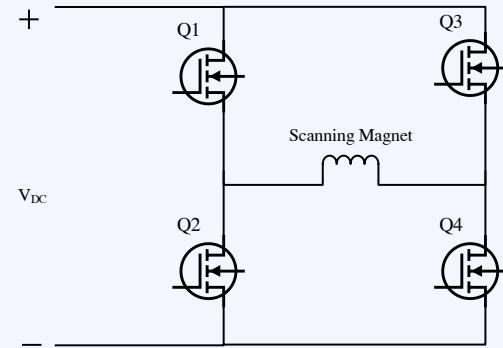

# POWER SUPPLY SYSTEM

- *Unipolar DC power supply*
  - 14 unipolar DC power supplies
  - stability better than 200 ppm
  - MTBF $\geq$ 50000 hours.

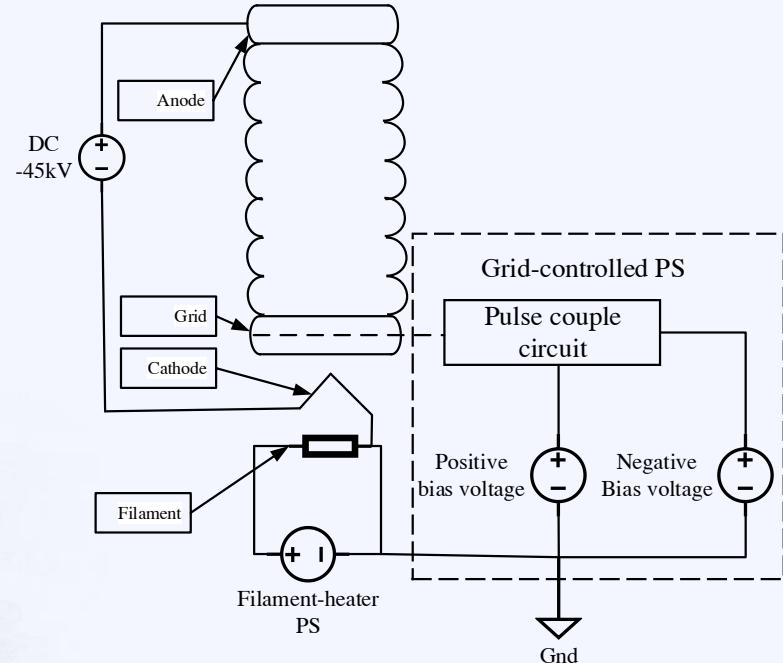

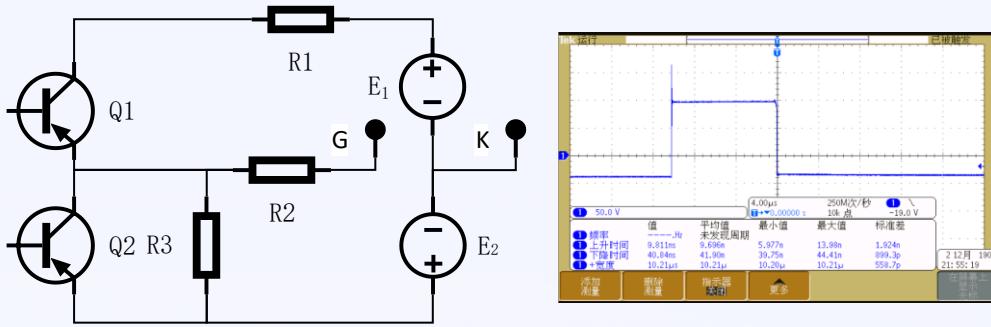

# POWER SUPPLY SYSTEM

- *Bipolar power supply for scanning magnet*
  - 37Hz &  $\pm 10\text{A}$
  - Time to respond to failure  $\leq 200\text{ms}$

# POWER SUPPLY SYSTEM

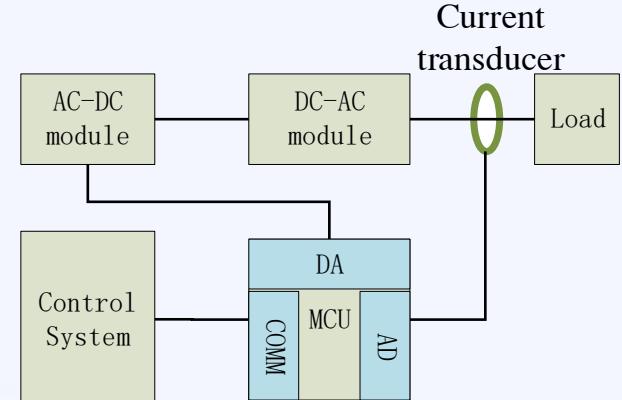

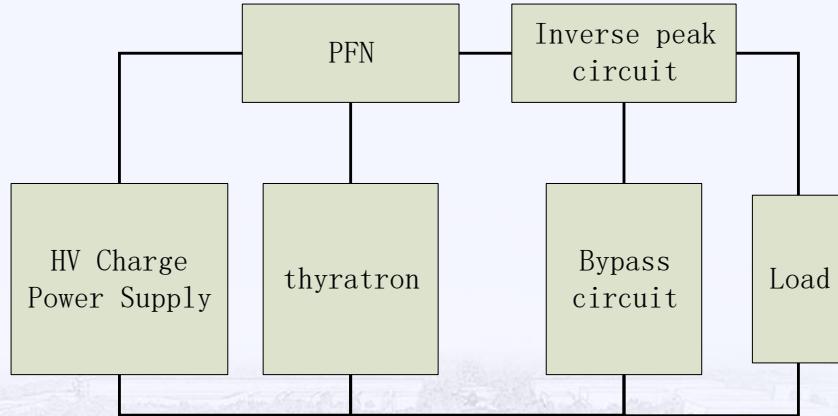

- Power supply for DC electron gun

- rising edge <10ns
- the falling edge <42ns

# POWER SUPPLY SYSTEM

- *Modulator and DC-AC inverter power supply*

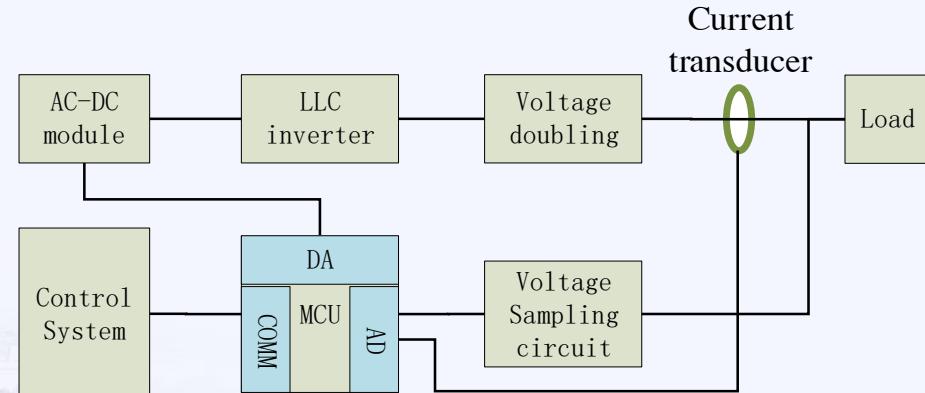

- Linear modulator
- DC-AC inverter power supply

# POWER SUPPLY SYSTEM

- *High Voltage Power Supply*

- LLC circuit
- voltage doubling circuit

# CUNCLUSION

The power supply system is used in IIF already, by use the modular design and the commercial products, MTBF is significantly improved and the debugging period is reduced.
